				HTML					
Deadline:				AIM:- To test whether the student know how to create an HTML page, how to add images and tables and links.					
				Experiment:- Create a HTML file to link to different HTML page which contains images, tables, and also link within a page.					
				Expected Output:- Creation of HTML page, clicking a link takes to another html page that contains images, tables and also link within a page. Please note that, students can either put single link to images, tables and links in one page or separate separate links.

Deadline:

HTML

AIM:- To test whether the student know how to create html form as mentioned in the exper

Experiment:- Create a html form as shown in the Fig 1.

Expected Output:- The output expects only the creation of a form as shown in Fig 1, and not mandating form validation. Form validation is expected to be done during script experiments.

				CSS					
Deadline:				Aim:- To test the following: 1) HTML form with validation for the user's name, email address, and comment (2) To test the visually appealing desig skill of students based on the way they use CSS to style.					
				Experiment:- You are developing a blog website for a company and need to create a form for users to submit comments. Design a form using HTML that includes input fields for the user's name, email address, and comment. Apply appropriate validation to ensure that the name and email address fields are not empty and that the email address follows a valid format. Additionally, style the form using CSS to make it visually appealing and user friendly.					
				Expected output:- HTML form with form validation for the user's name, email address, and comment. The form should be visually appealing with the use of CSS. The form validation should not be done using JavaScript. Please note that name and comment are text fields. Only validation required in those fields is the field should not be empty. Whereas email should require @ based valid email address.

Java Script

Aim : To test student skill to create an HTML form and validate it using Java script code

Create a HTML registration form and to validate the form using JavaScript code

Deadline:25/03/25

Expected Output - HTML form, with Java Script validation. It should be noted that HTML validation is not sufficient. The student should be able to clearly show the validation of atleast one field in the form using Java Script.

Java Script

Aim: To check whether the knowledge of student in JavaScript event handling in the context of mouse hover.

Deadline: 25/03/25

Create a HTML page to display a new image and text when the mouse comes over the existing content in the page using JavaScript Event Handling

Expected output: Mouse hover over an existing content in the HTML page should be detected and should display a new image and text. This should be done through JavaScript Event handling.

				MySQL					
Deadline:				Using PHP and MySQL, develop a program to accept book information viz. Accession number, title, authors, edition and publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings

23MCAJ202 Web Application Development Lab Rubrics

Rubrics	Proficient (4)	Adequate (3)	Poor (1)
Completeness and accuracy	The lab is complete and accurate in context of implementation. The student is able to show the output requirements of the experiment.	The lab is mostly complete and accurate in context of its implementation. The student is able to show the ouput requirements partially.	The lab in its current state is not implementable. The student is not able to show the output requirements.
Efficiency	Efficient implementation. The code runs in reasonable time.	The implementation is somewhat efficient. The code runs, but takes an observable delay to run after multiple tries.	The implementation is very slow. The code takes a very long time to run after multiple tries.
Coding Standards	The lab is fully implemented using coding standards and the code should be uploaded to Github. The coding standards here means code alignment and comments.	The lab is not implemented using coding standards, but code is uploaded to Github	The lab is not implemented using coding standards or not uploaded to Github
Aesthetics	The output is visually appealing	The output has all functionality, but not visually appealing	Not all output requirements are met and not visually appealing
Reusability	The lab implementation supports reusability. The code in its current form can be used as a module for another implementation or the current code can be extended by adding more functionalities	The lab implementation supports reusability to some extent. The code requires extensive changes to make it reusable.	The lab implementation supports no reusability. The code cannot be reused by adding extra functionalities.
